Startup Lineup from Japan

Euglena

Euglena is a startup researching, developing and selling high nutrition foods, cosmetics and fuel for jet planes using microalgae (euglena). Their mission is to solve both food crisis & environmental problem at the same time. Euglena has accepted internship students from Emylon University of Lyon for the last 10 years and is eager to find joint research partners in France.

Mitsuru IZUMO

Cyberdyne

Cyberdyne develops robot suit named “HAL”, and is a leading figure in the field of healthcare robotics. “HAL” has a potential to solve problems in ageing society by supporting the recovery of brain & nerve disorder, nursing care, heavy work etc. Cyberdyne has already entered the markets in Germany and Poland, is willing to expand their business to other countries in Europe.

Yoshiyuki SANKAI

Spiber

Spiber develops a human made spider web, which is said to be 340 times stronger than steel. It is expected to be used in clothes, cars, human made blood vessels, construction materials and in many other industries, and has a potential to lighten, strengthen and de-carbon the materials.

It is now planning to collaborate with former director from Premier Vision, to enter the French Market.

Kazuhide SEKIYAMA

WHILL

WHILL’s personal electric vehicles are bringing a fresh perspective to personal mobility with an innovative design and state-of-the-art technology- creating the confidence to drive anywhere with unprecedented independence and style. It won the Best Innovation Award at Consumer Electronics Show 2018. It is planning to open a first office in France this autumn.

Satoshi SUGIE

Infostellar

Infostellar is a software-driven space communications infrastructure firm. It is dedicated to realizing smart, real-time transmission by providing sharing service of antenna facilities for space satellites. With the investment from Airbus Ventures, it is now on a step to entering the European market.
